

60% Energy Consumption Reduction

PowerPlug Pro is a highly effective PC power management solution for medium and large organizations. It has the capability to manage up to tens of thousands of PCs and leads to **significant energy saving - up to 60% reduction in PCs power consumption**. This translates to huge savings on electricity costs for your organization.

Saving Corporates And Governments Millions Every Year

PowerPlug Pro is successfully working on hundreds of thousands of computers in large enterprises, saving them millions every year. Our customers come from a variety of verticals including healthcare, universities, banks, insurance companies, government agencies, and more.

Adapting To Your Organization And IT Needs

PowerPlug Pro allows you to create customized Power Policies that are tailored to your employees' work and PCs activities. It also allows for scheduled and on-demand PC wake-ups for maintenance activities, meaning zero disruption to your IT operations.

4 Months Return on Investment for any Business Type

Achieve a full return on investment in as low as 4 months. The intuitive setup and fast client distribution make PowerPlug Pro up and running in hours. It seamlessly integrates with Microsoft Active Directory, Microsoft Configuration Manager (SCCM), and various Attendance Systems.

Unlimited IT Control & End User Wake Up Portal

PowerPlug Pro empowers your IT department by allowing administrators to easily define the conditions in which a computer will enter saving mode and when it should be available for maintenance operations. The PowerPlug Pro Wake Up Portal enables end-users and IT technicians to securely wake up and connect to the computers they are allowed to access with a single mouse click, ensuring that power saving does not interfere with end-user productivity or IT activities.

Maximum Security & Reports

PowerPlug Pro's patented Wake-on-LAN Mesh technology allows waking up every PC, across complex networks and multiple subnets, without compromising security or requiring any configuration changes. It also

allows you to easily track & trace power consumption and provide extensive out-of-the-box reports on power consumption, savings potential, actual savings achieved, carbon footprint reduction and much more.

Why We Do It?

“ THERE IS NO ENERGY SOURCE MORE **SUSTAINABLE AND AFFORDABLE THAN THE ONE YOU DO NOT USE.** ”

Saving electricity is still the most effective way to cut carbon emissions, and green IT solutions enable businesses to reduce their carbon footprint and protect the environment. Saving power on 1000 PCs prevents the emission of more than 200 tons CO² to our atmosphere. We do it out of love and care for the future.

In summary, PowerPlug Pro is a cost-effective solution that can help your organization save money and improve IT operations by **reducing PCs power consumption by up to 60%.**
